- This project analyzes Instagram influencer data
- Focus on engagement, followers, and performance
- Goal: Identify trends & insights for influencer marketing

Dataset Information

- Total Influencers: 200
- Followers range: 32M – 475M
- Features used:
    - Followers
    - Engagement Rate
    - Average Likes
    - Country

Key Metrics

- Average Engagement Rate: 0.000189
- Average Influencer Score: 81.82
- Most influencers have very high followers

Insight: High followers ≠ High engagement

Top Influencers (Engagement)

- jim
- thv
- badbunnypr
- tomholland2013
- karolg

Insight: Smaller audience can be help getting strong engagement .

Top Influencers (Followers)

- Cristiano Ronaldo
- Kylie Jenner
- Selena Gomez
- The Rock
- Ariana Grande

Insight: Celebrities dominate reach.

Followers vs Likes

- Strong positive correlation observed

Insight:
More followers → More likes
But engagement rate varies

Country Distribution

- USA – 36%
- Unknown – 34%
- Brazil – 7%
- India – 7%

Insight: Global influencer presence3

Key Insights

- High followers ≠ high engagement
- US dominates influencer market
- Engagement rate is relatively low
- Audience interaction varies across influencers

Business Recommendations

- Focus on engagement, not just followers
- Use micro-influencers for better ROI
- Target emerging markets (India, Brazil)
- Analyze influencer score before campaigns

Conclusion

This analysis highlights the importance of engagement metrics in influencer marketing. While high follower counts provide reach, engagement determines actual audience interaction.
